

# NCP Secure Enterprise HA Server

for Linux

## Release Notes

**Service release:** 12.11 r46805

**Date:** January 2020

### Prerequisites

#### Linux Distributions:

The following Linux distributions are supported with this release:

- Debian GNU/Linux 10.1 / 10.2
- Red Hat Enterprise Linux Release 8.1

#### NCP Secure Enterprise VPN Server ab Version 12.10

### Update Prerequisites

Please read the instructions for updates of previous versions in the manual carefully.

### Prerequisites for Configuration via Secure Enterprise Management (SEM)

- Secure Enterprise Management Server: Version 5.20 or higher
- Management Plugin Server Configuration: Version 12.12 or higher

## 1. New Features and Enhancements

None.

## 2. Improvements / Problems Resolved

### Restart of the NCP Secure Enterprise HA Server

If a restart command is sent to the NCP Secure High Availability Server via the NCP Secure Enterprise Management, this led to a shutdown of the NCP Secure High Availability Server. This issue has been resolved.

## 3. Known Issues

### NCP Secure High Availability Server Cannot Start After Update

After updating version 10.x to the current version of the NCP Secure High Availability Server, the server cannot start. By setting the owner of the file to `ncp` you can fix this problem:

```
chown ncp:ncp vpngw1.p12
```

# NCP Secure Enterprise HA Server

for Linux

## Release Notes

**Major release:** 12.10 r44217

**Date:** June 2019

### Prerequisites

#### Linux Distributions:

The following Linux distributions are supported with this release:

- Debian GNU/Linux 9.9
- Red Hat Enterprise Linux Release 7.5 & 8.0

#### NCP Secure Enterprise VPN Server ab Version 12.10

### Update Prerequisites

Please read the instructions for updates of previous versions in the manual carefully.

### Prerequisites for Configuration via Secure Enterprise Management (SEM)

- Secure Enterprise Management Server: Version 5.20 or higher
- Management Plugin Server Configuration: Version 12.10 or higher

## 1. New Features and Enhancements

### Privilege Separation

Due to privilege separation, the NCP Secure High Availability Server does not run in the root context.

### New Configuration Option "Hold Master Mode"

The configuration option "Hold Master Mode" influences the behavior of the NCP Secure High Availability Server in Failsafe / VRRP mode. If a primary NCP Secure High Availability Server is restarted after a failure, it only functions after the administrator has reactivated it. This avoids disconnecting the VPN tunnel from the backup system.

## 2. Improvements / Problems Resolved

### Improved Logging

Log outputs can be filtered according to defined areas by assigning scopes.
